Subject: Concerning Conflict Minerals

To whom it may concerns

Conflict Minerals are minerals coming from regions where the trade of them can be used to finance armed groups; fuel forced labour and other human rights abuses, and support corruption and money laundering. The so-called Conflict Minerals are tin, tungsten, tantalum and gold, also referred to as 3TG and are mostly used in the electronic industry.

According to United States legislation (The Dodd-Frank Act), all American companies must report where they purchase the four Conflict Minerals. The EU Commission has proposed a similar approach and from 1st of January 2021, an EU Regulation on Conflict Minerals will come into force, Regulation (EU) 2017/821. The regulation aims to stop the financing of armed groups in developing countries through the trade of Conflict Minerals and to ensure that the vast majority of these minerals and metals imported to the EU are sourced responsibly.

According to the above, Stena Stål hereby declares that we do not market any product that contain any Conflict Minerals and to the best of our knowledge, there is no such link between the production of raw material from our suppliers and any conflict area. We also require our Suppliers to update us regularly about the Non-Use of Conflict Minerals in their supplied materials.
